

Cloud Computing with AWS

WEEK 2 – AWS Compute & Storage Services

Topics Covered

- Amazon EC2 (Elastic Compute Cloud)
- Launching and managing EC2 instances
- Connecting via SSH
- EBS (Elastic Block Store) and Snapshots
- Amazon S3 in depth – bucket policies, static website hosting
- AWS CLI basics

Assignments

1. Launch and Configure an EC2 Instance

- Launch an Ubuntu server.
- Install Apache or Nginx and host a simple website.

2. S3 Static Website Hosting

- Create an S3 bucket and host an HTML/CSS website.
- Configure permissions for public access.

Mini Project

“Deploy a Static Portfolio Website on AWS”

- Create a simple portfolio using HTML/CSS.
- Host it on an S3 bucket.
- Use AWS CloudFront for CDN distribution (optional).

Learning Outcome

Students gain practical experience in launching EC2 instances, configuring servers, and using S3 for hosting and storage.
