

Cloud Computing with AWS

WEEK 3 – Networking, Databases & Serverless Computing

Topics Covered

- Amazon VPC (Virtual Private Cloud)
- Subnets, Route Tables, Security Groups
- AWS RDS (MySQL/PostgreSQL) setup and connectivity
- Introduction to AWS Lambda and Serverless Architecture
- Amazon API Gateway integration with Lambda
- Monitoring with CloudWatch

Assignments

1. Setup a VPC with Public & Private Subnets

- Launch EC2 instances inside subnets.
- Configure inbound and outbound rules.

2. Create and Connect AWS RDS Database

- Launch a MySQL RDS instance.
- Connect it to a sample application hosted on EC2.

Mini Project

“Serverless Contact Form using Lambda & API Gateway”

- Create a Lambda function to process form data.
- Integrate API Gateway endpoint.
- Test the API using Postman or browser.

Learning Outcome

Students learn AWS networking fundamentals, database services, and serverless function deployment.
